

**AMENDMENTS TO THE CLAIMS**

1. - 13. (Canceled)

14. (New) A storage medium containing at least one program for commanding a plurality of applications in a terminal to operate at least one function of at least one application by:

detecting a current light status for a plurality of buttons,

determining one of said applications to command and a function of said application to operate based on the light status, and

sending one or more commands to operate said function of said application using an API specified for said application.

15. (New) The storage medium of programs in accordance with claim 14, wherein said API is Java API.

16. (New) The storing medium of programs in accordance with claim 14, wherein said API is an e-mail application.

17. (New) The storing medium of programs in accordance with claim 14, wherein said API is for a browser application in the terminal.

18. (New) The storing medium of programs in accordance with claim 14, wherein said API is for a camera application in the terminal.

19. (New) The storing medium of programs in accordance with claim 14, wherein said API is for video streaming application in the terminal.

20. (New) The storing medium of programs in accordance with claim 14, wherein said API is for music player in the terminal.

21. (New) The storing medium of programs in accordance with claim 14, wherein said API is for location service application in the terminal.

22. (New) The storing medium of programs in accordance with claim 14, wherein said programs can command the plurality of applications in the terminal using a plurality of APIs of said plural applications respectively.

23. (New) The storing medium according to claim 14, wherein a user of the terminal commands said application to operate said function of said application.
